

AWS Capstone Project - Final Deliverables & Links

Event Registration & Ticketing System | Verified public links for submission

Primary Submission Link	URL
GitHub Repository	https://github.com/florenceodoi/aws-serverless-event-registration-system
Live Demo	https://d1cm5g5okmu6ix.cloudfront.net

Required Deliverables

Deliverable	Direct evidence / link
GitHub repo with API code	Open repository https://github.com/florenceodoi/aws-serverless-event-registration-system
CI/CD pipeline (GitHub Actions)	Workflow source - sam-ci.yml Successful workflow run
Lambda functions	Lambda source directory Create Event List Events List Registrations Register Event
DynamoDB table definitions	template.yaml - EventsTable and RegistrationsTable The SAM template defines both DynamoDB tables with PAY_PER_REQUEST billing.
CloudWatch alarms config	AWS CloudWatch Alarms Console (AWS sign-in required) A standalone public alarm-configuration file is not currently visible on the GitHub main branch.
README file	README.md https://github.com/florenceodoi/aws-serverless-event-registration-system/blob/main/README.md

Important submission check: The public repository currently exposes the GitHub Actions workflow, Lambda source code, SAM template with DynamoDB definitions, and README. The CloudWatch alarm requirement is part of the capstone deliverables, but a standalone public alarm configuration file is not currently visible on the repository main branch. If your assessor requires a public config artifact rather than an AWS-console screenshot, add the alarm JSON/YAML file to the repository before final submission.
